

Cellular Hydration Optimization)

What is iCell Water?

iCell is a unique supplement made up of specific amino acids and creatine designed to help modulate cellular volume. It's a revolutionary way to bring water into the cell which will improve muscle strength and performance. When water filters out of the cell it will shrink and shrivel enough to hinder their work. Enhanced cell volume sets up the cell to be in its ultimate signaling state. This is why iCell water works so well with peptide therapy, as it complements its effects and helps your cells function optimally.

Why Your Doctor Might Recommend iCell Water

- Enhance peptide therapy
- Enhance aesthetic procedures
- Improve exercise performance/capacity
- Improve hydration status
- Improve muscle mass/function
- Improve fat loss
- Improve cardiometabolic health
- Immune health

How to take it and what to expect

- Place 1 scoop full in large 2 liter water container filled with water and ice
- Shake thoroughly then drink throughout the day
- You can add flavoring if needed
- Make sure drink is cold and has ice.
